**ABSTRACT:** The online job portal system is a platform between job seeker (student) and job provider (company). The scholar or job seeker will simply realize and apply for job by logging in to the system. The manager or the company will simply get skilled worker from our job web site by posting job. The job portal web site is a common place between job seeker and company.

When job seeker login into his account then he will get a notification of the company lists that match along with his profile or education detail. Thus job seeker will simply apply to the present job and he may also send message to the company for different inquiries. Once the company login into the account, the company or the manager will get alert of job seeker lists that match with all the criteria for denote job. On-line job portal provides an easy way to search jobs. User will simply login and may search on the market jobs, and may simply apply to the work in which the user is interested.

**KEYWORDS:** Job portal, Organization, Scholars, Online job

## I. INTRODUCTION

Online Job search system is created to encourage the general organization framework to deal with the different data of the Job Seeker and Job Provider and the cycles associated with an organization. Thus, that association can get to exact data rapidly and effectively when required, accordingly improving its operational proficiency and effectiveness. Through this entrance managers can likewise post their positions and audit applications. The customary enlistment frameworks are time taking and expensive. A task searcher should secure positions through commercials, college fairs, job fairs and so on, and the businesses should invest a lot of exertion to track down the correct contender for an empty position. This application tends to such weaknesses and is a helpful stage for both occupation searchers to secure and go after jobs and for hiring managers to post positions and audit application

## II. REVIEW ON LITERATURE

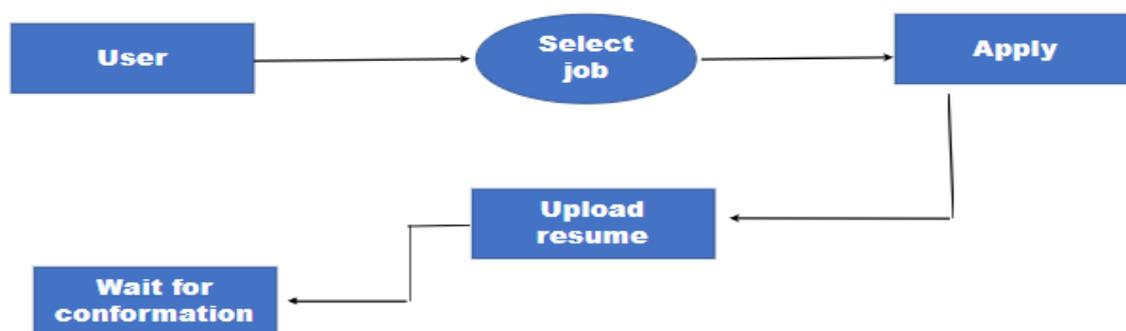

There are numerous applications created, identified with this Online Job Portal, yet, these frameworks are intricate for their own motivation. The greater part of them doesn't have the concentrated information base and simple admittance to clients. So in this undertaking, we are carrying out this application through a concentrated information base and simple to-utilize access for job searchers and job providers. The manager is the essential entertainer to keep up the information base, and furthermore acknowledges remarks from job providers and job searchers to improve and build up the application's graphical UI. Enrolled job searchers can likewise take the organization online test. Furthermore, qualified candidates can be grouped by this framework depending on their capabilities and companies' prerequisites. This section will focus on writing audit and related to the study of the framework. It assists with distinguishing the issues that exists in the current frameworks and furthermore it gives the best way to deal to accomplish the goals. It will manage correlation among gateway and existing framework. Online occupation entryway framework is a sort of e-enlistment framework that permits client or the job searchers and organizations to apply jobs and post positions online individually. Online occupation gateway is an e-enlistment framework that can be characterized as enlisting measure which is directed through electronic devices, for example, an association's corporate intranet or its public web. This enrolment cycle through the online occupation gateway can be additionally be named as e-enlistment, web enlistment or online enrolment (M Kerrin, 2003) search different sites and going after positions is a lot exhausting on the grounds that they require a great deal of additional exertion. It requires some investment to know and find out about an

organization, the prerequisites the organization needs for a position and furthermore their capabilities. The best way to search up for jobs is through websites or employee references. This thought inspired me to build up a framework where time and endeavours are saved on the grounds that the job post will tell the job searcher where the organization is found and perhaps find out more.

### III. PROPOSED SYSTEM

The proposed system can be used by any employee to apply job and any employer are post to job. The benefit of this proposed system is that website can be used for providing information about the online job. So, the job seeker will simply apply to the present job and he may also send message to the company for different inquiries. This proposed system is more efficient and faster than the existing system.

### IV. TECHNOLOGIES USED

#### A. Visual Studio

Visual Studio is an integrated development environment that is used to develop computer programs for Windows. Visual studio can also be used for developing web sites, web applications, and web services.

#### B. SQL Server

It's a relational database management system that supports a number of applications, including business intelligence, transaction processing and analytics. Microsoft SQL Server is built on SQL, which is a programming language used to manage databases and query data.

### C.HTML

HTML (Hypertext Markup Language) is the code that is used to structure a web page and its content. For example, content could be structured within a set of paragraphs, a list of bulleted points, or using images and data tables.

### D.CSS

CSS is the language for describing the presentation of Web pages, including colours, layout, and fonts. It allows one to adapt the presentation to different types of devices, such as large screens, small screens, or printers.

### E. JavaScript

JavaScript is a programming language that conforms to the ECMA Script specification. JavaScript is high-level, often just-in-time compiled, and multi-paradigm. It has curly-bracket syntax, dynamic typing, prototype-based object-orientation, and first-class functions.

### F. ASP.Net

ASP.NET is an open source, server-side web application framework created by Microsoft that runs on Windows and was started in the early 2000s. ASP.NET allows developers to create web applications, web services, and dynamic content-driven websites.

## V. IMPLEMENTATION AND WORKING

Implementation is the most crucial stage in achieving a successful system and giving the user's confidence that the new system is workable and effective. Every module was tested individually with data stored. The user can log in using the provided user id and password. The user has access to view the company details and can apply for it according to their skill or location preferences. The admin has a separate login and is responsible for adding new jobs, sending e-mails to the respective candidates and to record the report of the candidates who applied for the job.

## VI. CONCLUSION AND FUTURE WORK

The wider areas of job looking out facilitate the fast and simple access to opportunities. The increasing job opportunities and dynamical state of affairs of the business setting nowadays has created a lot of folks to go looking for higher career and employers to go looking for higher potential. This case has prompted several to manoeuvre to job

portals to seem for the ways in which has been wide accepted and totally helpful in job searching. During this the work portals assumes bigger importance and that we might develop such an efficient system that is employed by ton several job hunters and employers.

## VII. RESULT

The software is used for the people searching for the jobs. The software is developed using ASP.NET, DBMS in Visual studios, and SQL Server. The online job portal system benefits for both the person who applied for the job and the company which provide the job.
